

DESIGNED TO PERFORM

EASYFIX CUBICLES CUBICLES FOR DAIRY CATTLE

The revolutionary EASYFIX Cubicle provides the freedom of outdoors - indoors and it is shown that it maximises the comfort of the cow, it improves its safety and it increases its performance.

Since the launch of the EASYFIX Cubicle in 2009, we have sold two hundred thousand cubicles in twenty-five countries around the world. The addition of the flexible rubber ring has been a resounding success, having transformed the cubicle into the "The Safest and Most Comfortable Cubicle for Cattle in the World".

Our flexible system of cubicles caters for the sizes of all cows, makes them want to lie down in the correct position and for longer periods. The increase in the rest period together with the increased comfort of the cow leads to greater milk production.

HOW DOES IT WORK?

The flexible arms of the cubicle, the flexible rubber ring and the rubber coupling to the educator tube give freedom of movement inside and outside the cubicles, all this leads to a reduction in injury to the neck and flanks.

The reduction of the lesions is a very significant factor that contributes to the reduction of healthcare costs and veterinary bills and to the reform rate.

The fixed rubber coupling has been designed to connect the educator tube to the cubicle. Its composition in modelled natural rubber is particularly suitable for cows and does not require any maintenance.

The patented flexible rubber coupling has been designed in such a way to make things easier for larger cows and improve their well-being and comfort.

EASYFIX Scratcher is a new innovative accessory to the cubicle designed to offer improved comfort to the cow. It has been designed to improve the cows' environment, foster the increase in the use of the cubicles and to create pleasant stress free surroundings.

ADVANTAGES	CHARACTERISTICS
<ul style="list-style-type: none"> • The flexible and mobile arms lead to a reduction in lesions. • All sizes (of cows) are advantaged. • The cows are encouraged to lie down properly in the cubicle. • The cubicles are more spacious; the cows lie down more quickly and for longer periods. • The improvement in the comfort of the cow reduces healthcare costs, veterinary costs and the reform of the cows. • The longer rest periods leads to the increase in milk production. • Improvement in the welfare of the cow and better conditions. • Reduced rates of restocking. 	<ul style="list-style-type: none"> • Flexible plastic tubes, rubber ring, rubber coupling to the educator tube. • Flexible and fixed rubber couplings available. • The future after years of iron partitions • Easy to install and regulate. • Available in red, green or blue.

GUARANTEE
10 years.

WHAT DO OUR CUSTOMERS HAVE TO SAY?

"The cows have taken the arrival of their new home extremely well" The more comfortable they are, the more milk they produce with the same degree of input."

Cavan Johnston, Strangford

"We wanted to make the cows more comfortable and for that we chose EASYFIX Stall Dividers. These partitions are the same as many others but instead of having a steel ring they have a rubber ring. This slight difference makes it possible to have more flexibility and comfort for the cows. When a cow tries to stand up, it is helped in its movement. They are flexible enough to guarantee that the cows are where they should be without making them move everywhere."

Mitchell Dairy & Grain, Winnebago, USA

"I replaced my steel cubicles with EASYFIX Cubicles in 2015. The cows now lie down in a better way in the cubicles and no cows have suffered lesions. I have the peace of mind of knowing that there will not be any surprises when I go into the shed each morning."

Brendan Gildea, Dunmore, Co. Galway

"The concept of plastic was new to us. We like the comfort that EASYFIX Cubicles give our cows and prevent some of them getting caught, trapped or injured. We believe that, after all, any blow, bruise or pain caused by the fact that the cows are lying in a steel cubicle reduces their performance in terms of milk production, silent heat and diminished fertility. We have also adopted the cubicle for weaned calves with a few D.I.Y. adjustments."

Noel & Raymond Harte, Ballyshannon, Co. Donegal

"They are satisfied with EASYFIX Cubicles, the cows do not get trapped and they love them. I would not install a steel cubicle even if you gave it to me as a present. EASYFIX maintains that cubicles reduce lesions; I say they eliminate them."

James Conn, Castlerock, Derry
