

IRRIGATION CHANNELS

IRRIGATION CHANNELS

Water has long been considered one of the most valuable resources on our planet.

The importance of preserving this natural element has led us in the early eighties to market prefabricated channels that would bring numerous benefits to those who had to use this resource: we are talking about the world of agriculture. For 30 years, this prefabricated product has been appreciated in the sector due to the positive benefits it provides:

- Elimination of water losses due to natural soil absorption or infiltration due o damage caused by rodents.
- Near elimination of routine weed cleaning from the channel bed.
- Simplification f irrigation interventions.
- Low cost, simplicity and speed of installation.
- Perfectly smooth inner surface that provides greater and better water flow.
- Low environmental impact.

In addition to the supplied material channels are available for diverting water flows, produced with header openings depending on the needs of the customer. The male-female coupling provided on the channels is also present on this manufactured product to guarantee a perfect seal..
