

PREFABRICATED ENCLOSURES

One of Fattori srl's core products are industrial prefabricated enclosures. These units come shaped in uninterrupted walls, 600 cm long, and are produced both in a fully closed version and an open version, which is called "comb-shaped".

The elements, when placed adjacent to one another, provide boundary delimitation for private areas. The components are available in different heights, varying from 200 cm up to a maximum of 250 cm and, depending on the requirements of the project, units of varying lengths can be created, according to the requests of the Construction Supervisor.

The paving involves on-site production of concrete plinths complete with galvanised iron plates onto which panels are welded which will make up the enclosing wall. The use of these manufactured products offers the advantage of creating a robust and cost-effective structure in a relatively short time.
